Experience

Software Engineer II – BetterPlace

April 2023 — Today

- I've been working on the Early Wage Access product after I am finished with the BetterPlace Money app which would help the business service the rejected customers on the app. The current rejection rate is 60%.

- I built a web version for the loan app using react-native-web which would increase the product availability.

- I've been also mentoring, coaching, and leading a team of 3 developers on BetterPlace organisation.

Software Engineer II – Bueno Finance (YC W'21)

January 2021 — March 2023

- I have managed, implemented and automated new features on the loan application – push notifications, sdk integrations etc.

- I have developed a credit line product – KreditPe for D2C marketplace with features like ScanPay and Bank Transfer.

- I loved being part of the team by participating in design critiques, contributing reusable components to the design system, and helping with interviews.

- Built and designed CRM an internal software to help our support team quickly view loans, PTP's, payments and other necessary details resulting in resolved user inquiries which saved us time and helped to build trust among customers.

Software Engineer – Jaarwis Technologies

April 2018 — December 2020

- I and a team member have built AMS for Waynaq, a product for mass scheduling, attendance management for delivery workers. Feature – Chat application using Websocket API, Geofencing, CRUD and TimeTracker using react.js and react-virtualized

- Eco-Service 2.0, a fleet management, tracking and servicing software using react.js
